

A NEW PACING MOTOR To Replace Tandems?

TO ME...PLY.

Rumours of a new "mystery" pacing machine have been in circulation for quite a time around the Parisian tracks, and last Tuesday the machine made its first public appearance at the Parc des Princes track.

The idea of the "cyclo-moteur," as it is called, is that it will provide just about the same assistance and shelter to a follower as a tandem, but without any of the disadvantages, such as the necessity for changing over to fresh pace.

Berthillen, the Saint Dennis rider, who has been testing the machine in private for over a month, has challenged any rider to a race behind these machines at any distance between 5 and 50 kilometres.
