

# There Are Mopeds . . . . "G2" AND There is the Guzzi

During the recent moped craze, all kinds of fancy brands appeared on the market. Some manufacturers made claims about reliability, spare parts availability, etc. that owners found out to be only hollow promises.

The Guzzi "G2" represents an engineering triumph, built by skilled craftsmen with an eye for detail, and a pride in workmanship.

Moto Guzzi is an established motorcycle manufacturer with a world wide reputation of satisfying the performance requirements of customers all over the world. Moto Guzzi, having over half a century of experience in the two wheel market, are fully aware of the importance of technical services and the maintenance of an adequate stock of spare parts.

The technically advanced "G2" just bristles with quality and features like front and rear suspension, speedometer, luggage rack and large-diameter

tubular steel frame. We feel that the Moto Guzzi "G2" is one of the finest mopeds available today, brisk performance, smart styling, easy operation, low maintenance and competitively priced. If you are thinking of buying a moped to get around town comfortably, safely, and economically, see your local Moto Guzzi dealer and look over the new Guzzi "G2". You will never be disappointed owning and riding the one moped that stands above the ordinary every-day models that carry names nobody has heard of in the past, and, may never be heard of in the years to come.
