

POWER & PEDAL

with the SCOOTER

Volume XI | No. 6 | May | 1963

THE three new *Kreidler* models briefly described in our last issue are being shown for the first time in Britain at the Blackpool Show from Hans Motors.

They are notable for exceptionally powerful 50 c.c. engines with machine specifications that look like full sized luxury motorcycles. Of approximately "square" dimensions 40mm. x 39.5mm. and with $8\frac{1}{2}$ to 1 compression ratios, the 3-speed model (which is available with either pedals or kick starter) has an output of 3.6 b.h.p. and a claimed maximum speed of 40 m.p.h. The 4-speed models are faster.

All models are fully sprung fore and aft, the "Super" having bottom link forks, and all have fully enclosed transmissions and dual seats with pillion footrests as standard. Big headlamps, 29-watt lighting and every kind of practical luxury characterise the specifications. The machines look expensive but the stuff is all there for the quality buyer.

NEW LIGHT M/CYCLES

The Kreidler range (Florett shown below)
