

THE CYCLE AND MOTOR-CYCLE TRADER

November 16, 1906

6, ALDERSGATE STREET, E.C. gether 24ozs. They will also exhibit a new wood rim, which, instead of being square laminated, has circular laminations, and in consequence will be very useful for wired on tyres.

motor tyre puttees, motor car buffers, South
and tyre stopping, a new pattern non-slipping band for motor cycles.

H. MILLER & CO., LTD., BIRMINGHAM. (237)

Will be exhibiting a full line of accessories, the chief features being the Won't-go-Out lamps for cars, motor cycles, and cycles. In car lamps, the well-known Arclite head-lamp, Miller side-lamp and tail-lamp, all brought up-to-date and much improved. For motor cycles, the separate generator Cetolite and motor Edlite. With cycle lamps, the firm intend for the next season to give the highest possible value. The well-known Cetolite acetylene lamp and Bell Rock oil-lamps will now be sold at a reduction of 40 and 30 per cent. respectively. This reduction has been made not by any sacrifice of quality, but by important economies in manufacture. The highest quality will still be maintained, but they will retail at prices hitherto paid for medium-priced goods only. The Carbo and Bola acetylene lamps have been improved in important points, as have the Bolalite and Millo oil-lamps. There is a magnificent range of bells fitted with new clip, and a good range of oilers, toe-clips, spanners, and all accessories. Oils, carbide, outfits, and all chemical goods suitable for the cycle trade will be on show, and the exhibit will contain items of interest to all sellers or users of motor and cycle accessories.

MILLS & FULFORD, COVENTRY. (102)

This exhibit is of great interest

J. H. MARTIN, 38, BERNARD STREET, SOUTHAMPTON. (257)

This firm supply the "Dreadnought" motor clothing, which they show in very large and interesting variety. The "South-onia" motor air cushion is another feature here and should prove an attractive selling line. Mr. Martin also shows a full line of tyres and accessories for cycles and motor cycles.

H. MILLER & CO., LTD., BIRMINGHAM. (237)

Here is a fine range of the famous "Miller" lamps for both cycles and motors in great variety; also horns, oils, and carbide tins. A new acetylene lamp for motor cyclists with separate generator is very neat. It retails at 16/-. The lamps are of usual standard pattern, but are greatly reduced in price for 1907, particularly the "Bell Rock," "Cetolite," the latter being both plated and oxydised. All the best quality lamps are made so that on opening every part is readily accessible for any purpose. The firm's "Arclite" head lamps for cars, and the new Miller side lamps are selling well, and they have some good cheap lines in bells for agents and factors.

MICROMETER ENGINEERING CO., COVENTRY. (281)

The well-known Micrometer springless free-wheel which is here in different bores and threads to
