The POWERBIKE

The attractiveness of the POWERBIKE has universal appeal. It is excellently balanced and perfectly engineered to provide the best of riding qualities. Safe, economical, easily operated and extremely practical for pleasure or business purposes.

Whether it be for city use, summer resort, to and from school, in rural communities, or out on the open road, the POWERBIKE affords excellent means for general, all-purpose transportation.

The POWERBIKE is attained by converting any standard bicycle, simply by removing the rear wheel and installing this self-contained unit.

The bicycle frame is not changed, cut or altered in any way—making it possible to remove the unit and restore the bicycle to its original form at any time.

It is equipped with a $1\frac{1}{2}$ H. P. motor, complete with gas tank, kick starter, automatic clutch and conventional coaster brake. Safety of operation has had careful consideration and no attempt has been made to attain excessive or dangerous speed. Therefore, the speed of the POWERBIKE has been intentionally controlled to approximately 30 to 32 miles per hour.

Simplicity of control and economy of operation are instantly apparent in the POWERBIKE. It can easily be ridden by any person who has ridden a bicycle. More than 80 miles to the gallon, in city traffic, and well over 100 miles on the open road.
