REYNOLDS

160

"531"—under this simple designation, at the end of 1933, an entirely new type of steel tube was evolved by Reynolds. This superior material is now rapidly superseding previous types of tubing. Exhaustive tests have proved the efficiency of "531." This exhibit will also include a display of the Reynolds aluminium alloy cycle fittings, which combine lightness with strength. Examples of Reynolds Hiduminium products are the R.R.56 handlebars, weighing from 9 oz., costing from 7s. 9d. to 13s. 3d., the R.R.56 adjustable handlebar stem costing from 9s. 9d. to 12s. 9d., and the R.R. 56 seat pillars, weighing from 4 oz., and costing 4s.
